Benefits for Managed Service Providers

- Multitenant support increases backup and recovery efficiency
- Comprehensive dashboard allows admins to monitor job status by client
- Detailed client usage reports to simplify billing admin processes
- Multiperson Approval prevents unauthorized access and data loss from human error

Core Capabilities

- Comprehensive M365 support ensures all critical client data is protected
- Highly secure architecture protects client data from human error and attackers
- Modern UI simplifies backup and restore processes improving workload and efficiency
- Storage flexibility allows client data to be stored where needed to meet client needs for compliance

It might be time to reevaluate your current Microsoft 365 data protection solution.

Microsoft 365 generates and stores high-value, business-critical data, but since Microsoft doesn't protect it, ensuring protection and security of the data is the organization's responsibility. Today's recovery solutions for M365 are outdated, inefficient and aren't designed to optimize MSP workflows, leading to excessive administrative time spent on recovery and billing. Most solutions either have too many unnecessary features or not enough, and they often lack the essential security measures to protect backups from malicious attacks. Upgrade to a solution that is secure, reliable, and efficient, ensuring your data is always protected and accessible.

Introducing M365 data recovery built for MSPs from day one.

SaaSAssure enhances M365 data protection for MSPs with a modern interface designed to make admins more efficient at handling backup and recovery operations for clients while increasing the level of security provided. And with broad support for additional business-critical SaaS applications, clients can be offered broader protection for more of their vital SaaS data.

With improved focus on usability, security, and flexibility, SaaSAssure has the ability to streamline Microsoft 365 protection while offering business growth into other SaaS services, all at affordable rates that allow MSPs to offer more value while increasing their margin per client.

Security First Data Protection

- **Industry 1st — Multiperson Approval:** Requires up to three admins to approve data destructive tasks.
- **AES 256-bit Encryption:** Full encryption in-flight and at-rest to protect backup data from unauthorized access.
- **Multifactor Authentication:** Use any Time-based One-time Password (TOTP) tool to protect against access from compromised credentials.

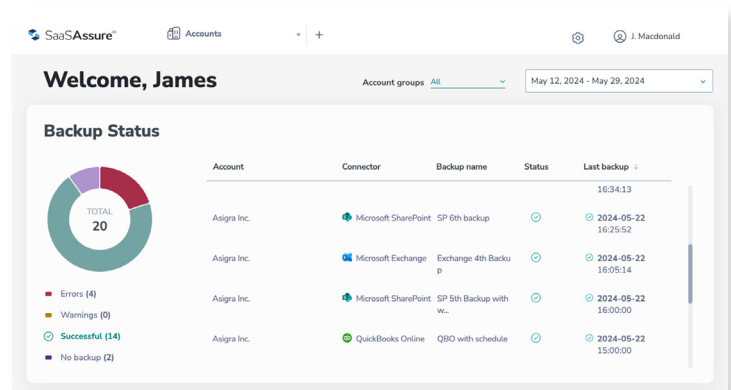

Efficient Backup & Recovery

- **Incremental Forever Backup:** Reduce backup job size and time with incremental backups.
- **Full Restore:** Restore the full SaaS data set at once.
- **Point-in-time Restore:** Choose from up to 999 previous points in time to restore.
- **Automated restore:** Simple click to start functionality for data and meta data.

Ease of Use & Flexibility

- **Simplified UI:** Straightforward interface means initial setup takes less than 5 minutes, and most daily tasks take less than 4 clicks.
- **Customizable Dashboards:** Dashboards can be organized by geography, client, client group, business unit or any other organizational structure.
- **Storage Flexibility:** Backups can be sent to the SaaSAssure cloud or any S3 compatible storage to meet regional data sovereignty needs.

Microsoft 365 Online Data Protection:

How SaaSAssure Compares to the Rest

M365 Recovery: Common Industry Features

- Microsoft only
- Focus on Sharepoint and File Recovery
- May lack teams recovery options
- Outdated, cumbersome user interfaces
- Confusing usage reporting
- Lack of storage options
- Security is limited to encryption and multifactor authentication

Microsoft 365 Recovery: SaaSAssure Platform

- Focus on full Microsoft 365 suite
- Modern, Easy to use UI
- Simplified dashboards
- Built-in usage billing reporting
- Storage flexibility
- Security includes industry first Multiperson Approval and Role-based Access Controls

About SaaSAssure

Total control over data, or data sovereignty, solves many problems. However, backing up the fast-growing mountain of data from SaaS apps is a daunting task. Partial solutions only paper over the need for future work. What's needed is a way to close data gaps, keep up with data growth, and even make comprehensive backups stable and secure not just now but in the future. SaaSAssure helps businesses of all sizes accomplish that.

“FOR CUSTOMERS WHOSE SAAS DATA IS NOT JUST VALUABLE BUT VITAL, THE INTRODUCTION OF ASIGRA'S SAASASSURE IS A GAME CHANGER, THE SIMPLICITY AND RAPID DEPLOYMENT CAPABILITIES OF THE PLATFORM PROVIDES SLICK DATA PROTECTION THAT SCALES EFFORTLESSLY. THIS ISN'T JUST A TOOL—IT'S AN ESSENTIAL PART OF MODERN DIGITAL RESILIENCE AND WE ARE EXCITED TO INTEGRATE THIS COMPREHENSIVE SOLUTION INTO OUR SERVICE PORTFOLIO AND BRIDGING THE SAAS DATA PROTECTION GAP.”

Gregg Mehr,
Chief Technology Officer, DataHEALTH
