Benefits for Managed Service Providers

- Multitenant support increases backup and recovery efficiency
- Client specific dashboards allow admins to monitor job status by client
- Detailed billing reports by client simplify billing admin processes
- Multiperson Approval prevents unauthorized access and data loss from human error

Core Capabilities

- Comprehensive QuickBooks Online support ensures all critical client data is protected
- Highly secure architecture protects client data from human error and attackers
- Modern UI simplifies backup and restore processes improving workload and efficiency
- Storage flexibility allows client data to be stored where needed to meet client needs for compliance

Safeguard Critical QuickBooks Online Data with Robust Protection

QuickBooks Online is essential for millions of business, managing everything from end-of-year tax planning to weekly payroll. Despite its importance, the critical data generated and stored in QuickBooks is often vulnerable to user errors, system issues, integration failures, and malicious attacks. Without proper protection, this vital data is at risk, yet most small businesses lack a backup solution for their QuickBooks data.

QuickBooks Online only provides data backup with its Advanced Tier, requiring each client's backups to be managed independently, which can overwhelm MSP workflows. Safeguarding and swiftly recovering this critical data is vital to maintaining seamless business operations and resilience. It is critical for businesses to protect highly sensitive QuickBooks Online data with a comprehensive SaaS backup solution.

Introducing QuickBooks Online Data Recovery, Built for MSPs from Day One.

SaaSAssure simplifies QuickBooks Online data protection for MSPs with a modern interface designed to enhance efficiency in handling backup and recovery operations for multiple clients, while significantly increasing security.

With a focus on usability, security, and flexibility, SaaSAssure streamlines QuickBooks Online data protection. This allows businesses to safeguard their critical financial data without the complexity of managing individual client backups. SaaSAssure's competitive pricing structure enable MSPs to offer greater value and security to their clients, positively impacting the bottom line. By ensuring robust protection for QuickBooks Online data, MSPs can confidently rely on SaaSAssure to maintain seamless operations and ensure resilience for their client SaaS adoption.

Security First Data Protection

- **Industry 1st — Multiperson Approval:** Requires up to three admins to approve data destructive tasks.
- **AES 256-bit Encryption:** Full encryption in-flight and at-rest to protect backup data from unauthorized access.
- **Multifactor Authentication:** Use any Time-based One-time Password (TOTP) tool to protect against access from compromised credentials.

Efficient Backup & Recovery

- **Incremental Forever Backup:** Reduce backup job size and time with incremental backups.
- **Manual Restore:** Contact SaaSAssure for recovery assistance.

Ease of Use & Flexibility

- **Simplified UI:** Straightforward interface means initial setup takes less than 5 minutes, and most daily tasks take less than 4 clicks.
- **Customizable Dashboards:** Dashboards can be organized by geography, client, client group, business unit or any other organizational structure.
- **Storage Flexibility:** Backups can be sent to the SaaSAssure cloud or any S3 compatible storage to meet regional data sovereignty needs.

QuickBooks Online Data Protection:

How SaaSAssure Compares to the Rest

QuickBooks Online Recovery: Common Industry Features

- Interface not designed for MSPs, no multi-client back up
- May not capture metadata
- Outdated, cumbersome user interfaces not designed for MSPs
- Confusing usage reporting
- Limited storage options
- Security limited to encryption and multifactor authentication

QuickBooks Online Recovery: SaaSAssure Platform

- Captures most important QuickBooks Online data
- Automated backup, set up in less than 5 minutes
- Incremental backups
- Data encrypted in-flight and at-rest
- Backup jobs organized by client group makes it easy to find data within dashboard
- Flexible storage options

About SaaSAssure

Total control over data, or data sovereignty, solves many problems. However, backing up the fast-growing mountain of data from SaaS apps is a daunting task. Partial solutions only paper over the need for future work. What's needed is a way to close data gaps, keep up with data growth, and even make comprehensive backups stable and secure not just now but in the future. SaaSAssure helps businesses of all sizes accomplish that.

“FOR CUSTOMERS WHOSE SAAS DATA IS NOT JUST VALUABLE BUT VITAL, THE INTRODUCTION OF ASIGRA'S SAASASSURE IS A GAME CHANGER, THE SIMPLICITY AND RAPID DEPLOYMENT CAPABILITIES OF THE PLATFORM PROVIDES SLICK DATA PROTECTION THAT SCALES EFFORTLESSLY. THIS ISN'T JUST A TOOL—IT'S AN ESSENTIAL PART OF MODERN DIGITAL RESILIENCE AND WE ARE EXCITED TO INTEGRATE THIS COMPREHENSIVE SOLUTION INTO OUR SERVICE PORTFOLIO AND BRIDGING THE SAAS DATA PROTECTION GAP.”

Gregg Mehr,
Chief Technology Officer, DataHEALTH
