Addressing the Growing SaaS Data Protection Gap

In today's business landscape 24/7 productivity, Software-as-a-Service (SaaS) applications dominate. With 130+ SaaS apps typically in use, organizations generate and store data across diverse clouds – every day, every hour, every minute. However, this cloud data is ripe for data compromise – outages, ransomware, phishing, human error and insider threats.

Most businesses incorrectly assume their cloud-based data is fully secured by the SaaS vendor. **In most cases, it isn't.** Under the widely-adopted shared responsibility model, SaaS providers ensure the security **OF** the cloud, while businesses are accountable for the data **IN** the cloud

Due to the limited awareness of the Shared Responsibility Model, businesses often back up only a handful SaaS applications utilized. This creates a growing gap between the data being backed up and the company's cloud data footprint.

In short, the sheer volume of SaaS applications generating and storing business-critical lacks the necessary protection. To bridge the growing gap, companies must implement a robust solution for managing data across diverse SaaS applications.

Business Require a Simple, Scalable Solution to Protect SaaS Data

SaaSAssureSM, powered by Asigra is a SaaS data protection platform ensuring the recovery, security and compliance of an organization's entire SaaS workload. SaaSAssure's cloud-native, multitenant solution provides a powerful platform to protect SaaS applications at scale.

With SaaSAssure, businesses can effortlessly safeguard Microsoft 365, Google Workspace, Salesforce, plus a broad set of applications used across the organization with one single instance. Built on the cutting-edge AWS architecture, ensuring security by design and safeguarding data in transit and at rest, SaaSAssure enables businesses to meet today's rigorous compliance standards.

Radically simple to use, SaaSAssure empowers Managed Service Providers, Solutions Integrators and IT administrators to ensure an entire organization's SaaS footprint is available and compliant – elevating the cloud security posture of the enterprise.

At a Glance

SaaS Data Protection

- Broadest SaaS app coverage
- Data assurance and control
- Risk & compliance mitigation
- Ransomware protection

Quick Set up & Easy to Use

- From installation to protection in under 5 minutes
- Automated backup & restore

One Console to Manage them All

- Maximize your IT resources
- Dashboard for required actions & notifications
- Multitenant

Secure by Design

- Industry-first Multiperson Approval (MPA)
- Multifactor Authentication (MFA)
- AES 256-bit encryption

Flexible Storage Options

- Asigra Cloud Storage
- Bring your own storage (BYOS)
- Data sovereignty

AI & Data Management

- Data analysis with artificial intelligence (AI) and machine learning (ML) with data export
